

Materials:

One 8 gallon trash bag

String

Colth tape

2 1/8" wood dowels - 21" long

Instruitions:

Lay trash bag out on a table and cut it so you have a single layer

Mark and cut the shape of the kite like the drawing

Draw lines where the spars will go
Tape over the ends of the spars and the corners of the plastic

Make small holes as shown on the drawing

Insert the ends of a 4' piece of string through the plastic at the hole and tie it securely to the spars

The plastic is on the wind side of the kite
Hang the kite from the loop in the string so it will balance with the bottom end closer to the floor - make a overhand knot in the string

Attach a tow line (string) and fly in a light wind
